TASK 4

INDEPENDENT AND CORRELATED NESTED QUERIES

AIM: TO Implement Independent and correlated nested subqueries in SQL.

PROCEDURE:

1. CREATE table Student3
2. Insert data to table.
3. Write a Independent nested queries
4. Executed correlated nested queries
5. Analyze result.

```
CREATE TABLE STUDENT3C  
STU-ID INT PRIMARY KEY  
NAME VARCHAR (50),  
AGE INT;  
DEPT ID INT);
```

INSERT INTO STUDENT3 VALUES

- (1, 'Ravi', 20, 101),
- (2, 'Rakesh', 19, 102),
- (3, 'Radha', 24, 103),
- (4, 'Kiran', 23, 101),
- (7, 'Sudheer', 22, 101),

SELECT * FROM STUDENT

	STU-ID	NAME	AGE	DEPTID
1	1	RAVI	20	101
2	2	Sneha	22	101
3	3	Anit	19	102
4	4	Priya	24	102
5	5	Kiran	23	101

SELECT NAME, AGE FROM STUDENT I
WHERE AGE > (SELECT AVG(AGE) FROM STUDENT 3)

	NAME	AGE
1	Sneha	22
2	Priya	24
3	Kiran	23

SELECT S1.NAME, S1.AGE, S1.DEPTID -- (CORRELATED FROM
STUDENT 3 S1

WHERE S1.AGE > 1

SELECT AVG(S2.AGE)

FROM STUDENT 3 S2

WHERE S1.DEPTID = S2.DEPTID)

	NAME	AGE	DEPTID
1	Sneha	22	101
2	Kiran	23	101
3	Priya	24	102

Thus, The
